describes the tweaks of taking the page on top position in Google by increasing the Page rank which may result in the improved visibility and profitable deal for an organization. Google is the most user-friendly search engine, which gives user-oriented results. In addition, most of the other search engines use Google search patterns; so we have concentrated on it. So, if a page is optimized in Google it is optimized for most of the search engines.

Searching is one of the most used actions on the Internet. Search engines as an instrument of searching, are very popular and frequently used sites. This is the reason why webmasters and every ordinary user on the Internet, must have good knowledge about search engines and searching.

Webmasters use major search engines for submitting their sites on it, and for searching. Ordinary users use major search engines primarily for searching, and sometimes for submitting their homepages or small sites.

If you are webmaster, you will also need some information while preparing site for the Web and you will also use search engines. Then, when you finish with it, you must submit your URL to many search engines. After that you will check your URL ranking on every search engine... There are also hot news on every major search engine, many other interesting contents... All of this shortly describes why search engines are so popular.
